**What is Bootstrap?**

**How to import Bootstrap**

**Bootstrap Grid and Container**

**Complete interesting practical exercises**

# WHAT IS BOOTSTRAP?

Bootstrap makes designing websites much easier for developers. It's one of the most popular ways to build front-end sites and applications...

- A CSS Framework, just like the Animate.css!
- Made by Twitter
- Aims for a Mobile-First Responsive Design
- Famous for its Grid System
- The beta of v5.2 is currently out
- The latest update was version 5.2.3 (check it out: [click here!](#)).

# HOW TO LINK BOOTSTRAP TO HTML

For the first import, you will need wifi to acquire the CDN. CDN stands for Content Delivery Network.

In simple terms, a CDN is a download of the Bootstrap pages onto your browser.

After you use it for the first time, it's basically saved in your browser and ready for future use!

## BootstrapCDN

The recommended [CDN](#) for [Bootstrap](#), [Font Awesome](#), [Bootswatch](#) and [Bootstrap Icons](#)

# HOW TO LINK BOOTSTRAP TO HTML

```
<!doctype html>
<html lang="en">
  <head>
    <meta charset="utf-8">
    <meta name="viewport" content="width=device-width, initial-scale=1">
    <title>Bootstrap demo</title>
    <link href="https://cdn.jsdelivr.net/npm/bootstrap@5.2.3/dist/css/bootstrap"
  </head>
  <body>
    <h1>Hello, world!</h1>
    <script src="https://cdn.jsdelivr.net/npm/bootstrap@5.2.3/dist/js/bootstrap"
  </body>
</html>
```

Just like the CSS, but for Bootstrap, we also need to add some JavaScript to make some components work. Make sure you have the Bootstrap import line BEFORE your local CSS stylesheet. You can find the appropriate link [here](#).

# NOW LET'S PRACTICE TOGETHER

## BOOTSTRAP IMPORT

MODULE 4: BOOTSTRAP

5 MINS

### Exercise 1.0 - set up

Create HTML file and CSS file and link them.

### Exercise 1.1

Import the Bootstrap starter template from [here](#) (Quick Start 2.)

### Exercise 1.2

Add an h1 and add the class display-1 to it.

### Exercise 1.3

Go into your CSS file and change the colour of the element with the display-1 class. Then, using the Bootstrap Utilities classes [here](#), center your h1 and adding a top and bottom margin

### Exercise 1.4

Import a Bootstrap Component from [here](#) - we'll import the accordion

### Exercise 1.5

Bootstrap provides the accordion with 3 layers, let's add a 4th!

# BOOTSTRAP EXAMPLES

Codepen is a great place to learn about how code styling works. Here are just a few of the examples you can find about using the Bootstrap layout...

- <https://codepen.io/eatsleepweb/pen/wNyGZw>
- <https://codepen.io/hvmiller/pen/pjWMdd>
- <https://codepen.io/mad-d/pen/pvjyzb>

As you can see, these examples focus more on layout than complete styling  
- but this is an important first step for learning responsive design.  
In your free time, check out more examples of how to use Bootstrap.

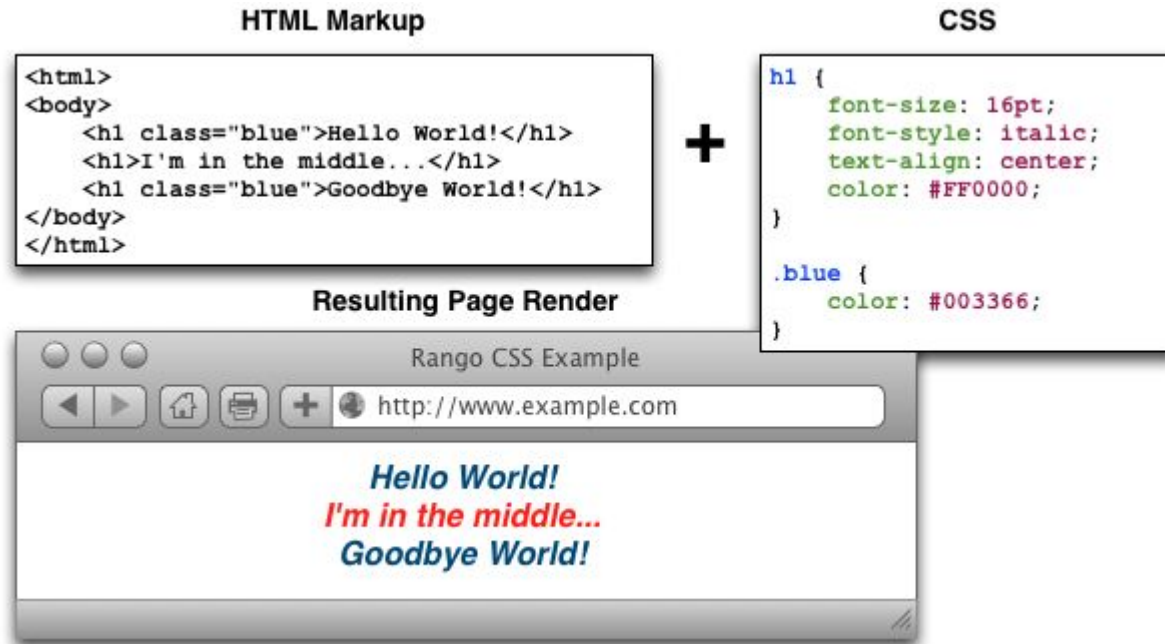

# BOOTSTRAP GRID SYSTEM

Bootstrap is famous for its grid system, which makes it much easier to build websites for both web and mobile. The grid system is made up of containers, rows and columns to make sure that everything is always in the right place! It uses a 12 column system and is made with flexbox, so it's fully responsive!

The Bootstrap grid relies on using classes. You've come across classes before when working with CSS. We assign these classes to elements we want to customize. Let's remind ourselves about classes...

# WHAT CLASSES MAKE UP THE BOOTSTRAP GRID?

## Containers

Used to wrap and pad website elements

## Rows

Used to create horizontal groups ( — this way)

## Columns

Used to create vertical groups ( || this way)

# Bootstrap Grid System

Below is an example of using the Bootstrap Grid System. As you can see, we are wrapping these elements together within a container div, and then we are creating one row. Within this one row, there are three different sections. Each of these sections are columns. Think about it like designing a building step by step!

One of three columns

One of three columns

One of three columns

```
<div class="container">
  <div class="row">
    <div class="col-sm">
      One of three columns
    </div>
    <div class="col-sm">
      One of three columns
    </div>
    <div class="col-sm">
      One of three columns
    </div>
  </div>
</div>
```

# Bootstrap Grid System

There are lots of different things we can do with this grid system, depending on what we hope to build and how we wish to style it. You can see a detailed list of example container uses column structure on the [bootstrap website](#). This is an example of adapting styling for mobile and desktop devices.

#TEST DIFFERENT STYLES  
OUT YOURSELF TO LEARN  
MORE

.col-xs-12 .col-md-8		.col-xs-6 .col-md-4
.col-xs-6 .col-md-4	.col-xs-6 .col-md-4	.col-xs-6 .col-md-4
.col-xs-6	.col-xs-6	

```
<!-- Stack the columns on mobile by making one full-width and the other half-width -->
<div class="row">
  <div class="col-xs-12 col-md-8">.col-xs-12 .col-md-8</div>
  <div class="col-xs-6 col-md-4">.col-xs-6 .col-md-4</div>
</div>

<!-- Columns start at 50% wide on mobile and bump up to 33.3% wide on desktop -->
<div class="row">
  <div class="col-xs-6 col-md-4">.col-xs-6 .col-md-4</div>
  <div class="col-xs-6 col-md-4">.col-xs-6 .col-md-4</div>
  <div class="col-xs-6 col-md-4">.col-xs-6 .col-md-4</div>
</div>

<!-- Columns are always 50% wide, on mobile and desktop -->
<div class="row">
  <div class="col-xs-6">.col-xs-6</div>
  <div class="col-xs-6">.col-xs-6</div>
</div>
```

Copy

# NOW LET'S PRACTICE TOGETHER

## BOOTSTRAP IMPORT

MODULE 4: BOOTSTRAP

5 MINS

### Exercise 2.0 - set up

Create a new HTML file and import Bootstrap.

### Exercise 2.1

Create three equal-width columns in your HTML doc. Name them column-one, column-two, and column-3.

### Exercise 2.2

Use the row-columns class (`.row-cols-*`) to add two columns to each of these elements. Name the first three elements row-1, and the second three row-2.

9 MINS

### Exercise 2.3

Now, let's add more detail to what we've built. For the first column to the left, add the title Inventory. For the two after, name them Stock and Price.

### Exercise 2.4

Give the row-1 elements these values: Screwdriver, 12, £4.99.

Give the row-2 elements these values: AA Batteries, 35, £1.50.

GROUP EXERCISE

# Bootstrap vs CSS?

```
<!DOCTYPE html>
<html lang="en">

  <head>
    <!-- Metas -->
    <meta charset="utf-8">
    <meta name="viewport" content="width=device-width, initial-scale=1, shrink-to-fit=no">

    <!-- Bootstrap CSS -->
    <link rel="stylesheet"
          href="https://cdn.jsdelivr.net/npm/bootstrap@4.5.3/dist/css/bootstrap.min.css"
          integrity="sha384-TX8t27EcRE3e/ihU7zmQxVncDAy5uIKz4rEkgIXeMed4M0jlfIDPvg6uqKI2xXr2"
          crossorigin="anonymous">

    <!-- My CSS -->
    <link rel="stylesheet" type="text/css" href="css/styles.css">

    <!-- Website title and icon-->
    <title>Hello, world!</title>
    <link rel="icon" href="images/icon.png">
  </head>

  <body>
    <h1>Hello, world!</h1>

    <!-- Bootstrap JavaScript -->
    <script src="https://code.jquery.com/jquery-3.5.1.slim.min.js"
            integrity="sha384-DfXdz2htPH0lsSSs5nCTpuj/zy4C+OGpamoFVy38MVBnE+IbbVYUew+OrCXaRkfj"
            crossorigin="anonymous"></script>
    <script src="https://cdn.jsdelivr.net/npm/bootstrap@4.5.3/dist/js/bootstrap.bundle.min.js"
            integrity="sha384-ho+j7jyWK8fNQe+A12Hb8AhRq26LrZ/JpcUGGOn+Y7RweNrtN/tE3MoK7ZeZDyx"
            crossorigin="anonymous"></script>

  </body>
</html>
```

Knowing what we now know about utilising Bootstrap, does that mean we should no longer be using our own style sheets?

Absolutely not!

We can still apply elements of our own style by linking to our stylesheets as well as using Bootstrap, however, you need to be careful of overlapping styling or crowding your code.

The most important thing to remember is that Bootstrap makes sites a lot more responsive, meaning a more straightforward build for different screens and platforms.

# Alternatives to Explore

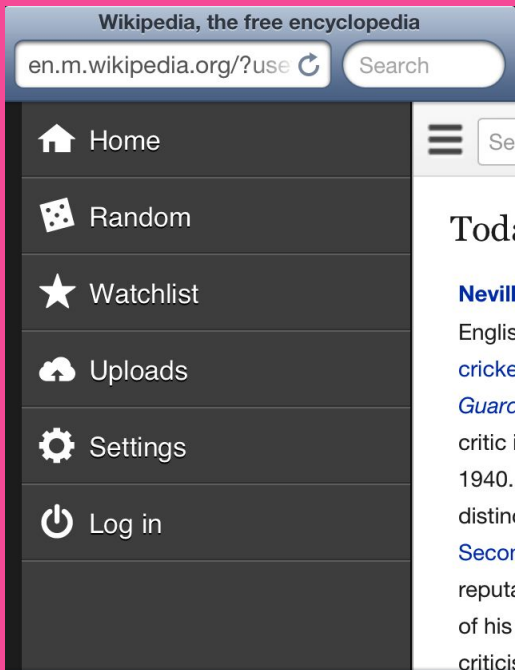

**BULMA**.io

While Bootstrap is definitely the most popular, there are other free, open-source frameworks to discover. Foundation by Zurb is one of the strongest competitors, used by Adobe and Amazon, and also works for HTML email structure. Bulma was built with a full flexbox grid and comes with stunning designs straight out of the box. But Bootstrap is still the choice for beginners and pros all over the world!

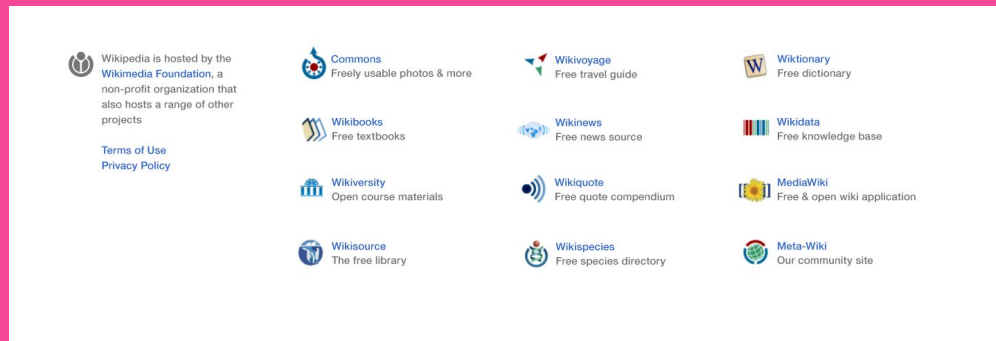

# HOMEWORK

IT DOES NOT HAVE TO FOLLOW  
THE ABOVE DESIGN AND CAN SIT  
AT THE TOP OF THE PAGE

## + Homework Task

Create a homework tracker (it doesn't have to be functional). Style the index.html page using Bootstrap, with either a navbar or a footer.

THE FOOTER CAN BE  
RELATIVELY SIMPLE: MADE-UP  
CONTACT INFORMATION,  
LOCATION ETC.

**THANK YOU**  
**HAVE A GREAT**  
**WEEK!**
